New heating and cooling concept with the innovative ISF1-Z Peltier

The innovative shaker incubator ISF1-Z Peltier uses long life Peltier elements for precise heating and cooling and also for humidity control. This eco-friendly concept makes coolants or compressors unnecessary and provides a large control range of 50%-85% (both humidifying and dehumidifying feasible). The ISF1-Z Peltier is suitable for applications in laboratories, research centers and production facilities and complies with GMP regulations. The incubator shaker is applicable for microbial, plant and animal/human cell cultures. It is also available with CO₂ control.
