

USP General Chapter < 711> Dissolution revisions are now official and the new USP DPVS - Prednisone is the official Reference Standard

In a continued effort toward comprehensive qualification of dissolution instruments, USP has developed a new product, Dissolution Performance Verification Standard (DPVS) - Prednisone tablets to create greater reassurance in the performance qualification of Dissolution Apparatus 1 and Dissolution Apparatus 2 using Performance Verification Testing.

Based on the studies that have been performed, the new product is more sensitive to operational and mechanical variables of instrument setup, less sensitive to media degassing, and delivers more consistent results.

The new standard is now available in our webshop:
